State Contract # 986739 Goldstrike Reclamation and Monitoring

Correspondence with BLM and DWR

Doug, I went out to the mine Friday. I decided to go out before this next big storm hits. It looks like a week long event. I didn't do any work this time, just monitoring. I decided not to replace the rain gauges yet since they will just freeze and break anyway. The heap effluent flow was about 3.5 GPM.

There was a trickle of water running in The East Fork. No cows had been on the site. Most of the snow was melted and no vegetation was greening up yet.

I did encounter a band of Chukers east of the East Hamburg pit. They were coming down to the pad water. No turkeys have made it up the east fork yet. They usually come in in March. The guzzlers are still full. With all the precip we should have a very green site in May.

Do we have to do a new contract this year?

There had been very little activity on the roads or site.

That's all for this month-

Dan Slyter
